Make 6 Animations with Claude @rahulaiwallah

Pick an animation, paste its prompt into Claude Code, and you get a ready 5-second vertical video (1080x1920) for your reels.

Before you start

- **Claude Code** open on a folder for your project (the desktop app's Code tab works).
- **One-time setup:** type *"Set up HyperFrames in this folder so you can make animations, and ask me before installing anything."*
- **Your own words** for each animation: a product name, a number, a few short lines. Use made-up brands and figures, never real ones.

The 3-step recipe

Every animation below is made the same way.

1. **Paste the prompt.** Copy it, replace the [BRACKETS] with your own words, and send it to Claude.
2. **Check it.** Ask *"Show me 5 frames from the start to the end."* If something looks wrong, say what and when, for example *"at 2 seconds the card covers the title, move it lower."*
3. **Render it.** When the frames look right, ask *"Render it to an MP4."* A 5-second clip takes about a minute.

One rule for every prompt: things should **pop, slide, draw or stamp in, never just fade in**. That's what makes it look professional instead of like a template.

1. App mockup

A 3D phone swings into place, its app screen builds itself, and three small cards pop out around it. **Good for:** app launches, SaaS ads, showing a client's product.

> Make a 5-second 9:16 video (1080x1920) of a phone on a soft blue-grey studio background with a shadow under it. The phone swings round on a spring to a three-quarter angle. Its screen shows a real app: a greeting, a balance that counts up to [AMOUNT], a line chart that draws itself, and three rows that slide in. Then three white cards pop out around the phone one at a time: a notification "[NOTIFICATION]", a stat card with bars, and a progress ring at [PERCENT]. Use one accent colour, [COLOUR].

If it looks off: *"Hide each card until its pop"* or *"make the phone screen text bigger."*

2. Timeline

A story told as a walk along the years: a blue line fills from past to now, and each milestone card pops up as it passes. **Good for:** brand stories, "my journey" reels, how a company grew.

> Make a 5-second 9:16 video (1080x1920) of a timeline painted on a light floor in perspective. At the top: a small label "[BRAND] · [START YEAR] TO NOW" and a headline "[HEADLINE]" with the last words in electric blue. A blue line and a glowing dot move from the far end to the near end, and each year turns dark as the dot passes it. At each of these milestones a white card pops up on a thin stem: [YEAR: TITLE, ONE LINE] × 5. The last card is solid blue with a "NOW" tag. The camera starts low and close, then rises and pulls back to show the whole line.

If it looks off: *"Use fewer milestones and smaller cards"* or *"frame the shot lower so cards don't cover the headline."*

3. Globe

A dotted globe spins while glowing arcs fly out from one point, and a big counter climbs. **Good for:** reach, audience and "we're now in X countries" stories.

> Make a 5-second 9:16 video (1080x1920) of a dotted globe slowly spinning on a dark navy background with a soft blue glow around it. Draw it on a canvas from the frame number, with made-up continents, not a real map. Glowing orange arcs fly out from one home point to [NUMBER] places, one after another; a small dot rides each arc and a ring pings where it lands. Above the globe: "[LABEL]" and a big counter that climbs to "[NUMBER] [UNIT]" in step with the arcs.

If it looks off: *"Slow the counter so it matches the arcs"* or *"make the arcs thicker."*

4. Receipt

A thermal receipt prints out line by line, gets torn off, and a red stamp lands on it. **Good for:** cost breakdowns, "what this cost me", price reveals.

> Make a 5-second 9:16 video (1080x1920) of a small dark receipt printer at the top on a warm grey background. A white receipt unrolls out of its slot in short steps, top of the receipt first: "[TITLE]", a dashed line, these items with prices [ITEM · PRICE] × 6, a bold TOTAL, a barcode and a thank-you line. Use a monospace font. The printer shakes a little and its green light blinks while it prints. At the end the receipt gets a small tug as it tears off, and a red "[STAMP WORD]" stamp lands at an angle and settles.

If it looks off: *"Unroll it from the top, header first"* or *"move the stamp up so it covers the total."*

5. Notifications

A phone lock screen fills up with payment notifications, faster and faster, while a total counts up. **Good for:** sales results, launch-day hype, social proof.

> Make a 5-second 9:16 video (1080x1920) of a phone lock screen with a big clock "9:41" and the date over a teal-to-purple wallpaper. Notifications from "[APP NAME]" drop in at the top, faster and faster: "Payment received · [AMOUNT] from [NAME]", 12 of them with different names. Each new one pushes the older ones down; after three, the older ones tuck behind in a stack with "+N more" under it. A white pill at the bottom counts the total up with every notification and bounces at the end. Use frosted glass cards.

If it looks off: *"Move the '+N more' line under the stack"* or *"make the notifications arrive slower at the start."*

6. Blueprint

A technical drawing of a product draws itself line by line on blueprint paper, then measurements and labels appear. **Good for:** product design, "how it's made", gadget and hardware reels.

> Make a 5-second 9:16 video (1080x1920) on blueprint blue with a fine white grid. A white line drawing of [PRODUCT] in an isometric (3D box) view draws itself stroke by stroke, like a pen plotter, with one side shaded with diagonal lines. Then dimension lines with arrowheads grow and their measurements type in ([WIDTH], [HEIGHT], [DEPTH]). Next, labels with thin pointer lines appear for "[PART 1]", "[PART 2]" and "[PART 3]". Last, a small title box draws in the corner: "[NAME] · REV A". Use a monospace font.

If it looks off: *"Hide the arrowheads until each line draws"* or *"make the drawing bigger."*

Quick tips

- **Be specific with time.** *"At 3 seconds"* gets a better fix than *"near the end."*
- **Keep words in the middle of the frame.** Instagram covers the top and the bottom, so ask *"keep all text between the top bar and the caption area."*
- **Save a favourite as a shortcut.** Ask *"Save this prompt as a slash command called /receipt,"* then next time just type `/receipt` and your words.
