How to Make the AI Video Editor Reel with Claude

Make this reel with Claude in 8 simple steps. Each step says what to **do**, what to **say** in your reel, and what to **show** on screen.

Before you start

- **You need:** the Claude desktop app (paid plan), one clear photo of you, and one video clip of you talking.
- **Set up:** make a folder called **AI Video Editor** with three folders inside: **Raw Footage**, **References**, **Exports**. Open Claude Code, choose **Local** and pick that folder.

The 8 steps

1. Find a reel you like

- **Do:** copy the link of a reel whose style you love. Ask Claude to download it and study the style.
- **Say:** "First, pick a reel whose style you love and give Claude the link."
- **Show:** the link pasted into the Claude chat.

2. Turn your photo into a cartoon

- **Do:** give Claude one clear photo of you. It draws a cartoon version that can talk and blink.
- **Say:** "Drop in your photo, and Claude turns you into a cartoon that talks."
- **Show:** your photo, then your cartoon face next to it.

3. Write a short script

- **Do:** ask Claude for a script under 60 seconds with a strong first line.
- **Say:** "Ask for a script under 60 seconds. The first line has to stop the scroll."
- **Show:** the script typing out, with the first line highlighted.

4. Pick a voice

- **Do:** Claude suggests 4 voices. Listen, pick one, and say yes before it records. Claude then cuts every pause.
- **Say:** "Pick a voice you like. Claude cuts every pause, so there's no dead air."
- **Show:** four voice cards, one picked, and the audio wave getting shorter.

5. Build the video

- **Do:** Claude makes every scene and moves each thing exactly when its word is spoken.
- **Say:** "Now Claude builds every scene, timed to every single word."
- **Show:** scenes changing fast, captions popping in word by word.

6. Add your real clips

- **Do:** put your talking video in Raw Footage. Claude places it inside the scenes.
- **Say:** "Drop in your raw clip, and it plays inside the video for a real feel."
- **Show:** your clip playing inside a phone frame.

7. Add sound effects

- **Do:** Claude adds a click, pop or whoosh to every movement. No music.
- **Say:** "Every movement gets a sound. No music needed."
- **Show:** icons popping in, each with its sound.

8. Export and post

- **Do:** Claude renders the video, sets the volume right for Instagram and saves it in Exports.
- **Say:** "Hit render, and your reel is in Exports, ready to post."
- **Show:** a progress bar, then the finished reel playing.

Prompts to copy

Step	Paste this into Claude
Setup	Install and test everything I need to edit videos in this folder.
1	Download this reel and tell me its style: <link>
2	Turn my photo into a cartoon face in that style that can talk and blink.
3 and 4	Write a script under 60 seconds with a strong hook. Suggest 4 energetic voices and wait for my yes.

5 and 6	Build the reel in 9:16 with my cartoon face and my clip from Raw Footage.
7 and 8	Add sound effects with no music, then render and save it in Exports.

The 3 full prompts

These are the three prompts the reel promises. Paste them into Claude Code in this order.

Prompt 01: Install the tools

```
None
I want you to be my video editor.

Install these tools on my computer:

1. Remotion: github.com/remotion-dev/remotion
2. HyperFrames: github.com/heygen-com/hyperframes
3. FFmpeg: github.com/FFmpeg/FFmpeg
4. Whisper: github.com/ggml-org/whisper.cpp
5. yt-dlp: github.com/yt-dlp/yt-dlp

Test each one, then tell me when you're ready.
```

Prompt 02: Learn your style

```
None
Learn the editing style from these videos:
[PASTE INSTAGRAM LINK 1]
[PASTE INSTAGRAM LINK 2]
[PASTE INSTAGRAM LINK 3]

1. Download each one into my references folder.
2. Study the style they share:
   Fonts, colours and captions
   Cuts, zooms and pacing
   Motion graphics, music and sound
```

```
3. Make me brand sheet I can review. Make it my own, not a copy.

Once I approve it, follow it every time you edit for me.
```

Prompt 03: Edit your video

```
None
Edit my new video into an Instagram Reel: [FILE NAME] in my raw
footage folder

1. Cut every pause longer than 0.1 seconds.
2. Follow my brand sheet.
3. Add captions, music and motion graphics.
4. Use anything in my references folder.

Show me a storyboard to review first, then export it to my
exports folder.
```

Quick tips

- Keep it under 60 seconds.
- Change something on screen every 2 to 3 seconds.
- Put your face and the headline on the very first frame.
- End with one clear ask, like "Comment EDITOR".
